EDUCATION

FAST-NUCES

Aug 2021 – May 2025

Bachelor of Science in Computer Science

EXPERIENCE

Nuclieos

May 2025 – Present

AI Engineer

- Build production AI systems—multi-agent LLM pipelines, conversational voice/chat agents, and end-to-end business-automation platforms—for clients across advisory, field-service, e-commerce, and automotive industries.
- Design multi-tenant architectures with role-based access and data segregation; integrate telephony/SaaS (Twilio, Retell AI, HousecallPro, Shopify) and deploy auto-scaling Dockerized infrastructure.

Pluginfy Technologies

July 2024 – May 2025

Associate Software Engineer

- Built full-stack SaaS and ERP platforms across accounting, manufacturing, and document-intelligence, covering the client lifecycle from UAE/FTA tax compliance to AI-powered document processing.
- Engineered scalable, real-time systems with Node.js, Express, PostgreSQL/Prisma, Redis, BullMQ, and Socket.IO, with secure authentication and per-user rate limiting.

Teamseven Solutions

Nov 2023 – July 2024

Software Engineer

- Built RESTful backends and multi-tenant SaaS modules for healthcare and property-management clients, focused on secure authentication and compliance-driven workflows.
- Delivered a HIPAA-compliant home-care platform (scheduling, rosters, payroll) and a super-admin module for rental management (listings, onboarding, invoicing, reporting).

PROJECTS

Trinity – Benchmark Business Advisory | *Next.js, Node.js, PostgreSQL, Multi-agent LLM*

- Built a multi-tenant advisory platform with role-based access, seat-based subscriptions, and advisor-assignment workflows enforcing client-level data segregation per Australian privacy standards.
- Designed 15+ AI advisory tools as multi-agent pipelines behind an API gateway, generating business plans, position descriptions, and KPI frameworks from client diagnostics.

Voice AI Receptionist – Australian Auto Parts | *Retell AI, Twilio SIP, Node.js* | +61 3 4327 9759

- Built a 24/7 inbound voice agent with a multi-node flow handling 4 lead-capture intents via mid-call variable extraction, code execution, and transactional email.
- Engineered domain logic (130-make vehicle gatekeeping, trade/retail branching, caller-ID resolution) and hardened flows against STT misreads, accents, and early-hangup lead loss.

Direct Mail Magic | *Next.js, Node.js, GoHighLevel*

- Built a multi-tenant white-label SaaS for direct mail campaigns with per-agency theming and GoHighLevel CRM integration.
- Developed an in-app Canva-like postcard editor for designing mail pieces.
- Integrated Stripe and Stripe Connect to enable multi-tenant payment splitting across agencies.

Shopify WhatsApp Support Agent | *Node.js, Docker, WhatsApp Business API, Shopify API*

- Built an auto-scaling, multi-tenant agent that provisions an isolated Docker container per user on demand, giving each tenant a sandboxed runtime and data boundary.
- Cut cold-start to near-zero via a pre-baked “golden snapshot” image; orchestrated the full container lifecycle (provisioning, health checks, teardown) through the Docker API.

Practiiz | *Node.js, PostgreSQL*

- Built a full-suite platform for accounting firms covering onboarding, audit, and UAE/FTA tax compliance (filing, registration, deregistration), with firm-wide timesheet, billing, and task automation.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++

AI / ML: OpenAI, Grok & Claude APIs, LangChain, LLMs, RAG, OCR, Multi-agent Orchestration

Web: React, Next.js, Node.js (Express), FastAPI, Redux, TanStack Query, HTML, CSS

DevOps & Cloud: Docker, DigitalOcean (+ Spaces), Azure

Databases: PostgreSQL, MongoDB, SQLite, Qdrant, Supabase, Firebase

Tools & Automation: Git, GitHub, n8n, GoHighLevel, SendGrid, ClickUp, VS Code
