Objective

Computer Science undergraduate at FAST NUCES with essential knowledge in Artificial Intelligence, including basic model training. Committed to leveraging strong technical expertise and analytical problem-solving skills.

EDUCATION

Bachelor of Computer Science **FAST NUCES**

SKILLS

Technical Skills C, C++, ASM, MSSQL, Python, 16-bit Assembly, Jupyter, Fast API, Unity, NLP, DIP
Cyber Security, AI/ML, Linux, Git & GitHub

Soft Skills Problem Solving, Critical Thinking, Leadership, Adaptability, Communication

EXPERIENCE

AI Engineer 06/2025 – 09/2025 | Core Edge Solutions Gulberg

- Built Lang Chain QuickBooks chatbot, reducing manual financial data entry by around 40%.
- Developed role-based access chatbot, achieving 100% role privacy for multi user apps.
- Integrated Full Stack AI features, improving user query resolution.

Unity game development intern 01/2025 – 02/2025 | GenISolutions

Learned Unity game development, C# sharp. Developed two projects, including a 3D game "Ball A Roll" and "Laser Starship".

Artificial Intelligence PNY Training 07/2024 – 12/2024 | NAVTTC

Course covering Artificial Intelligence, Fast API, Python, Poetry, PyTorch, Pandas, hands-on experience in model development, data handling, and API deployment.

PROJECTS

Emotion Detection from Live Camera Feed (Computer Vision & AI)

- Developed a real-time emotion detection system capable of classifying eight distinct human emotions (e.g., happiness, sadness, anger, surprise) using live camera input.
- Applied computer vision and deep learning (CNN) techniques to preprocess and analyze video frames effectively.
- Evaluated model performance using accuracy metrics, achieving high recognition accuracy on real-time data.
- Implemented using Python, TensorFlow/Keras, OpenCV, and integrated webcam feed for live demonstration.

BERT-Based Sentiment Classifier

- Tools: Python, Hugging Face Transformers, PyTorch, Sklearn, Pandas
- Developed a deep learning model using BERT for binary sentiment classification (Positive/Negative).
- Pre-processed 160,000+ tweets using regex cleaning, lemmatization, stop word removal, and TF-IDF for baseline testing.
- Achieved 0.81 on validation data; tested on unseen tweets with high confidence predictions.

AI-powered Resume & Project Assistant

- A modern web application that helps users intelligently update, enhance, and manage their CVs and project portfolios with the help of an AI-powered, mood-based chat system.
- Built with React, Fast API, and Supabase, this app streamlines professional profile management, project documentation, and content generation.

Achievements

Microsoft Certification

In Azure AI fundamentals, Computer Vision, NLP and Deep Learning.

Outstanding officer/Deputy of logistics

Received the Award from SOFTEC Pakistan's largest tech event organizer and a leading CS focused society.

Web development Udemmy

Completed a Web Development course on Udemmy, covering HTML, CSS, JavaScript,
